© 2026 - Car Maintenance MVP

A personal vehicle log for car profiles, service records, costs, documents, and reminders based on date or mileage.

About the product

A personal vehicle log for car profiles, service records, costs, documents, and reminders based on date or mileage.

Installation and first launch

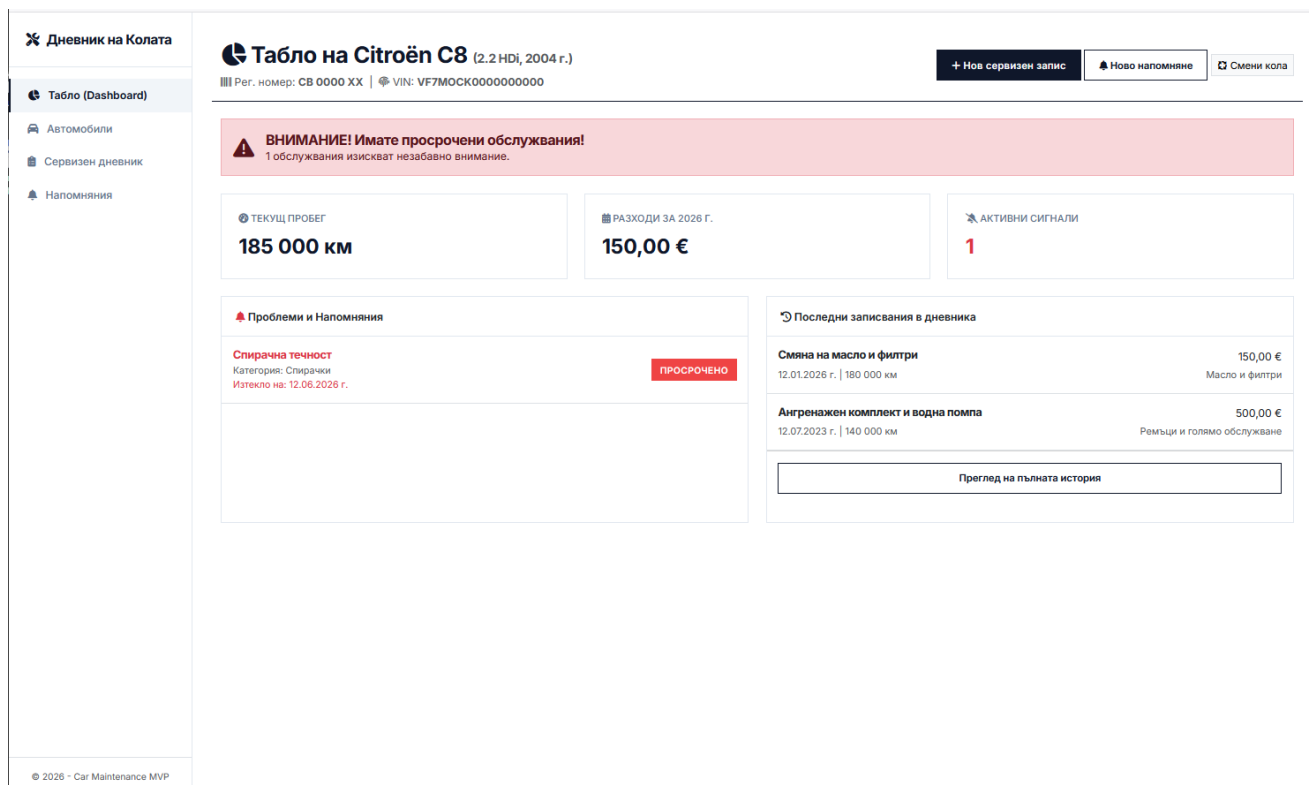

1. Download and run the Windows or macOS installer.
2. On first launch, the app creates its local database automatically.
3. Your data and attachments remain on your computer.

How to use it

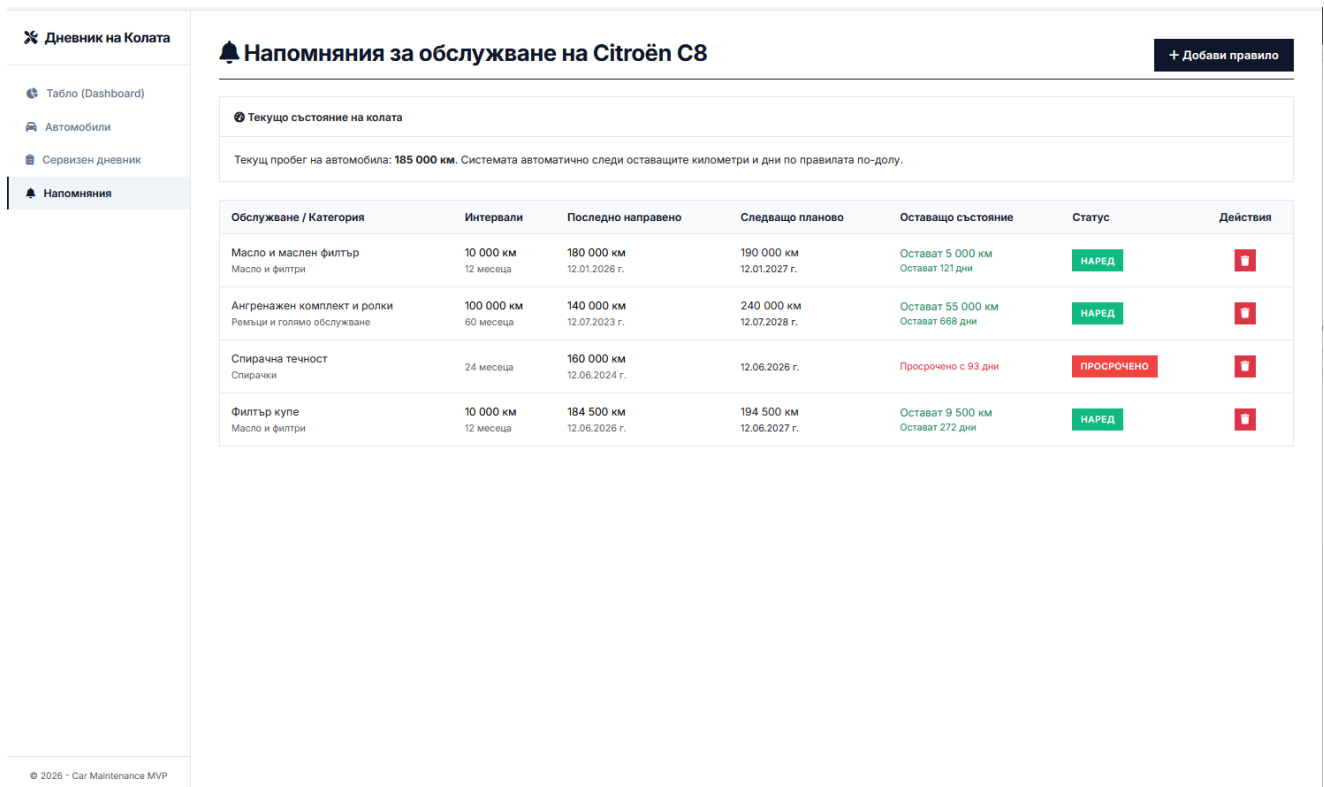

1. In Cars, add a profile with make, model, registration, VIN, fuel, and current mileage. Add a photo if desired.
2. Choose the active vehicle from the selector.
3. In Service log, add a repair or service, parts and labor costs, and attach an invoice or image.
4. Create a maintenance rule based on mileage, months, or both. The app uses whichever threshold comes first.
5. Read the dashboard colors: red is overdue, yellow is approaching, green is on time, and gray means more data is needed.

Useful notes

- Update current mileage regularly so reminders remain accurate.
