PROFESSIONAL SUMMARY

QA Automation Engineer with 5+ years of experience in software testing and 20+ years in quality control and process optimization. Hands-on experience in UI, API, backend, database, integration, regression, end-to-end, and performance testing. Develop and maintain automated test solutions with Playwright, Selenium, Postman/Newman, RestAssured, RestSharp, JMeter, and k6. Work with C#, Java, TypeScript/JavaScript, Python, and SQL, as well as CI/CD, Allure, GitHub Actions, Kafka, and UNIX. Strong focus on reliable test frameworks, traceable test documentation, defect analysis, and end-to-end QA process automation.

KEY SKILLS

- Test Automation: Playwright, Selenium WebDriver, Page Object Model (POM), NUnit, JUnit 5, Cucumber, Allure
- API & Backend Testing: REST API, Postman, Newman, RestAssured, RestSharp, Playwright API, JSON, XML, authentication, CRUD, contract validation
- Programming & Scripting: C#, Java, TypeScript, JavaScript, Python, SQL
- Database Testing: Microsoft SQL Server, PostgreSQL, MongoDB, SQL queries, data validation, JSON data analysis
- Performance Testing: Apache JMeter, Grafana k6, load and smoke performance testing, SLA thresholds
- Testing Types: UI, API, backend, database, integration, regression, smoke, exploratory, end-to-end, performance
- CI/CD & Tools: Git, GitHub, GitHub Actions, Jira, Allure Reports, Playwright traces and screenshots
- Platforms & Integrations: UNIX, Kafka, web services, inbound/outbound interfaces
- AI-assisted QA: documentation analysis, test case generation, and automation based on predefined skills, standards, and rules

PROFESSIONAL EXPERIENCE

QA Automation Engineer

May 2025 - Present

ISI Markets | Sofia, Bulgaria

- Perform UI, API, database, integration, and regression testing for data-intensive applications and services.
- Validate REST APIs and backend processes; use Microsoft SQL Server to verify data, business rules, transformations, and integration results.
- Analyze requirements, create test scenarios and test cases, investigate defects, and contribute to triage, release validation, and communication with developers and business teams.
- Contribute to building an AI-based workflow that analyzes project documentation, generates test cases, and automates them according to predefined skills, standards, and rules.
- The implemented AI process accelerated the QA team's work by nearly 75% and significantly reduced test preparation and automation time.

QA Automation Engineer

Aug 2023 - Apr 2025

Datasciders Catenate | Sofia, Bulgaria

- Worked as the sole QA engineer in a project team of 12 developers, responsible for product quality throughout all stages of development.
- Primary focus was UI testing, complemented by backend and API testing with Postman and RestAssured.
- Built a Selenium and Java automation framework from scratch because automated coverage was minimal when I joined.
- Expanded automated coverage with Playwright and Python and maintained regression scenarios, test data, and defect documentation.
- Collaborated daily with developers on requirements analysis, defect reproduction, and fix verification.

Quality Assurance Engineer

Jun 2022 - Jul 2023

Codix | Sofia, Bulgaria

- Analyzed and prioritized client-reported issues and traced root causes across complex backend processes.
- Tested inbound and outbound interfaces, web services, and Kafka-based integrations.
- Created and maintained automated backend tests with Postman and RestAssured.
- Worked daily in a UNIX environment and validated communication and data exchange between integrated systems.

Quality Control / Prepress Automation

1996 - 2020

Dedrax, J-point, Brand Quadergy | Sofia, Bulgaria

- More than 20 years of experience in quality control, prepress production, and standardizing manufacturing processes in the printing industry.
- Managed quality control processes for incoming and outgoing files and created checklists for self-review and traceability.
- Developed automated checks, scripts, and workflow solutions to detect and correct errors, including integration with specialized software and ERP processes.
- This experience developed strong attention to detail, systems thinking, and a defect-prevention mindset.

SELECTED PROJECTS

Automation Testing Portfolio

Active project

GitHub: [ValBo71/AutomationTestingProject](#) | Public repository

- Playwright + C# + NUnit + Allure UI automation framework using the Page Object Model, covering 26 official Automation Exercise test cases.
- API automation projects with Playwright API, RestSharp, RestAssured, NUnit, and JUnit 5; authentication, CRUD, DTO models, dynamic test data, and JSON validation.
- Postman/Newman regression collections, including chained end-to-end scenarios and a suite with 91 scripts.
- Performance testing with JMeter and k6, automated GitHub Actions pipelines, CI artifacts, traces, screenshots, and test reports.

EDUCATION

Alpha 28 QA Automation - Telerik Academy | completed professional program

QA Automation - SoftUni

QA Fundamentals - SoftUni

Computer Engineering and Technologies - Technical University of Varna | higher education

Electrical Equipment of Industrial Enterprises - Technical School "Hristo Botev" | secondary vocational education

ADDITIONAL TRAINING

- SoftUni: JavaScript Fundamentals, JavaScript for Front-End, MS SQL, C#
- ITVDN: QA Start, Web Testing Automation on Java
- Hillel IT School: QA Manual
- Continuous self-study through Udemy, LinkedIn Learning, technical documentation, and specialized literature on software testing and clean code
